Potential competing interests: No potential competing interests to declare.

Details on how the data was collected such as, was it through an interview method or were the questionnaires distributed needs to be specified. Clarification on whether the questionnaire was tested for its validity or was a pre-validated one was used is required. Authors are requested to include details of the ethical clearance obtained. (letter number, date etc.) The result regarding "The majority of respondents, 57.5%, were aware of which eating habits pose a greater risk for dental cavities" is not included in table no. 2. The statement regarding nutrition education by those participants with post graduate degree is contradictory under the results and discussion sections. Please refer to the supplementary file attached for further clarification.
