The article titled A Narrative Review on the Management of Severe COVID-19 Infection Using Stem Cell-Based Therapies with a Focus on Registered Clinical Trials was evaluated. It is a detailed description of the place of stem cell therapies, especially clinical trials and in vitro studies, in SARS-CoV-2 (COVID-19), apart from classical existing drug treatments. As stated by the authors, it is a well-written and understandable article in good English that explains the advantages of an advanced treatment model, even if it is not applied acutely in an emergency. It is acceptable in this form. The figures used in the article appear to have been drawn by the authors. If they are taken from another source, a reference should be given.
