# Review of: "Evaluation of Antidiabetic Potential of Gymnema Sylvestre and Metformin Combination in Streptozotocin-Induced Diabetic Rats"

Marwan Salih Al-Nimer<sup>1</sup>

1. Clinical Pharmacology and Therapeutics, College of Medicine, University of Diyala, Iraq

1: Please use one term, either Type2 or Type II. Do not use both. It is preferable to use type 2DM.

2: Please write the rationale of the study. The authors wrote in the introduction that the herbal medicine has antidiabetic properties. Therefore, the authors need to write a sentence stating that their study will identify something which is not previously reported, e.g., concomitant determination of HbA1c and creatinine.

3: As there are two results (pre- and post-treatment), the applicable statistical analysis is either a paired t-test or difference-in-differences. The results require analysis by using a paired t-test. The other choice is to use a difference-in-differences test.

4: Refresh your references with updated references (e.g., from the last 5 years).
