Potential competing interests: No potential competing interests to declare.

1. There are some terms, which only the relevant community knows, to better support the readers, please provide their full forms too.
2. A more detailed introduction of the problem is required
3. A proper literature Review / Related work is needed that where these two terms have been used in the literature and whether the researcher have found them ambiguous.
4. It is encouraged to provide the mathematical evidence of your proposed HRSL that supports your hypothesis i.e. "This new name presents two advantages: it maintains a structure equivalent to the previous name its terms more appropriately define the nature of the mechanism of spatial localization"
5. need to increase references by covering some background/ theoretical knowledge.
