

# Review of: "Digital Mapping of Resilience and Academic Skills in the Perspective of Society 5.0 for Higher Education Level Students"

Margarita Núñez-Canal

**Potential competing interests:** No potential competing interests to declare.

Very interesting paper with a concept about Academic Digital Resilience.

This section appears to be a compilation of literature, but requires further review. It does not reflect the authors' own position, but rather comprises a collection of thoughts from other sources. To improve this section, it is recommended to rewrite it by incorporating the authors' own thoughts and opinions, and positioning the sources within the field using their own criteria. Additionally, it is suggested to review the most relevant papers published in the past few years on the impact of COVID-19 on education, such as <https://doi.org/10.1016/j.techfore.2021.121270>, and check their literature for any pertinent information.

It would be great if you could present the figures in a more academic manner, along with the sources for each concept.

The Covid-19 crisis has had a significant impact on education, and resilience must be considered in this context as a key factor. specially in the fist part of the article in the introduction

The term Society 5.0 lacks academic credibility, consider using the Fourth Industrial Revolution instead The fourth industrial revolution K Schwab, 2017
