The article is simple and clear but provides very general information about supply chain and digital transformation in the automotive industry. The title is promising but the content is obvious. I could not find anything new in this article. The proposed solutions are already being implemented by companies. We need to understand what is the state of the art of progresses. I suggest collecting data or more detailed information (case studies) on how firms are facing the transformation. As far as digital transformation is concerned, surveys on ICT usage in enterprises are available (on the OECD and the European Commission-Eurostat sites) that could help the authors understand the evolutionary path in the automotive industry. Supply-chains can be investigated by using data on international trade or input-output tables (ICIO tables-OECD, for example).
