**Potential competing interests:** No potential competing interests to declare.

The content of the article does not offer anything new regarding braking systems in motor vehicles. Moreover, automatic brakes have been widely used in motor vehicles for many years.

The theoretical introduction does not highlight any deficiencies in the systems currently in use. The research methodology relies on basic formulas and does not incorporate modern tools, such as numerical methods.

The results are based solely on laboratory tests, which do not reflect real-world conditions or relate to the intended application.

Considering these points, the article fails to contribute anything novel and is therefore recommended for rejection.
