Potential competing interests: No potential competing interests to declare.

The manuscripts need to be checked for English. Need to be written as past tense as the study already finished.

There is no results of the study. Manuscript was written in present continuous tense. Not sure whether it is a study protocol or a study findings.

All the variables should be defined according to how it been collected, measured and analyzed?

Findings of the pre-tested questionnaires and the modification made should be presented.

Discussion should be based on the study findings.
