Monoclonal Antibody 105AD7 Anti-idiotypic Vaccine

National Cancer Institute

Source

National Cancer Institute. *Monoclonal Antibody 105AD7 Anti-idiotypic Vaccine*. NCI Thesaurus. Code C2648.

A cancer vaccine consisting of a humanized monoclonal antibody that mimics a tumor-associated antigen 791Tgp72 (also known as CD55). Vaccination with this agent may stimulate a host cytotoxic T-cell response against tumor cells expressing CD55, resulting in tumor cell lysis. (NCI04)
