**Potential competing interests:** No potential competing interests to declare.

The topic seems timely and significant.

The research gap and problem statement should be logically presented, and the main objective and specific objectives should be clearly presented.

The key concepts should be defined and consistently used. Also, clearly present the main theoretical framework of the study and relate the main theory/theories to your study.

The justifications for selecting data collection method(s), sample method, sample size, analytical methods and techniques, etc., should be given.

The discussion should be critically done based on the findings of the study. The results/findings and the application of the main theory of the study should also be critically used to achieve the objectives and to answer the main problem of the study. Both practical and theoretical implications/recommendations should be given.

Critical analysis is needed rather than just reporting.

The implications would be practical if the article has real findings/innovation.

Maintain the logical flow in writing throughout the article.

Academic language should be used rather than words like I, you, we, they, my, our, there, may be, etc.

English proofreading is also recommended.

Avoid grammatical mistakes, typo errors, spelling mistakes, etc.

Strictly follow the recommended referencing style.
