This is a very interesting action research designed to promote renewable energy sources and empower rural communities for sustainable development. This should however be presented in an article format and not like a summarised report. Authors should consider revising this to provide a more interesting flow; starting with an introduction where you discuss the problem statement, objectives of the research, research questions and how you are going to solve the questions as well as how your research adds value to the already existing research and provide readers with what they expect to see in the next chapters. Authors can add more value by providing a brief discussion of findings from their Interviews, questionnaires, and participant observation. "A benchmark survey and needs assessment were conducted to gather data and insights regarding the community's electricity requirements and socioeconomic conditions" – we need the findings to be presented and discussed.
