Potential competing interests: No potential competing interests to declare.

The manuscript, entitled "***Effect of Supplementation with Moringa Oleifera on Antioxidant and Oxidative Stress Biomarkers of Infertile Women: A Pilot Open-Label Case-Control Randomized Clinical Study***," is merited for publication in **Qeios** after some major modifications. So, I have some points that may help to improve the work as follows:

1-Abstract is good but needs more explanation about the main aim of the work.

2- The introduction should be extended to discuss the hypothesis and research questions in detail. Additionally, the introduction should cover the recent literature related to this subject.

3- Material and methods

The methodologies should be explained in detail so that the results are reproducible.

4-Results

The results are clear and important.

5-Discussion

The discussion section still needs improvement and should be linked to the findings of the previous reports on this topic.

6- The conclusion

A section for conclusions needs more explanation and should include the most significant findings and future works only.

7- English writing should be checked by a native English-speaking expert.
