Roseomonas gilardii

National Cancer Institute

Source

National Cancer Institute. *Roseomonas gilardii*. NCI Thesaurus. Code C124371.

A species of Gram-negative, non-fermentative bacteria in the family Acetobacteraceae characterized as coccoid rods, appearing in pairs or short chains. *R. gilardii* does not hydrolyze esculin or oxidize salicin; citrate is utilized, and fructose and glycerol are oxidized.
