

Review of: "Prevalence of Buruli Ulcer Among Residents in Jasikan Municipality: A Cross-Sectional Study"

Arvind Kumar¹

¹ All India Institute of Medical Sciences

Potential competing interests: No potential competing interests to declare.

1-Study population need to be specified in terms of age, gender, morbidity etc

2-What are the parameters adopted to diagnose Buruli ulcer, need to be described

3-How many cases did not reveal any acid fast bacilli in the biopsy. Other morphological differential of the lesion will enrich the discussion.

4.Site of biopsy needs to mentioned as it affects the diagnosis.

5.Adding pathogenesis of Buruli ulcer will consolidate the discussion part.

6.Previous similar studies from African continent will cast more light on the variation of prevalence.

7. Why prevalence studies are still holding relevance, justify this and than make conclusion.

Over all study is good and can be published with these changes.

Thanks for let me review.
