**Potential competing interests:** No potential competing interests to declare.

Thanks for letting me review this paper.

After carefully reading the manuscript, I find the topic really interesting, but I believe that the author has failed to carry out a satisfactory literature review.

This review, as it stands, needs a complete rewrite and restructuring because it is superficial and lacks depth, to say the least.

Furthermore, it is recommended to include more recent works and emerging trends.

I recommend a major revision.
