# BCL5 Gene

National Cancer Institute

## Source

National Cancer Institute. *BCL5 Gene*. NCI Thesaurus. Code C122817.

Human BCL5 gene is located in the vicinity of 17q22 and is approximately 2 kb in length. This phenotype-only gene has not been linked to a known protein product. This locus may play a role in hematopoiesis. Chromosomal rearrangements involving this gene locus may be associated with both aberrant expression of the MYC gene and leukemia.
