Potential competing interests: No potential competing interests to declare.

I have analyzed the paper and deem it fit for publication because the paper contains an original contribution and has an in-depth literature review. The methodology is adequate and precise, the results are clearly analyzed, and the conclusion is adequately linked in coherence with the other sections of the paper. The only problem is the quality of communication and grammatical errors. I suggest that the authors pay attention to the clarity of expression and readability, the sentence structure, and acronyms.
