I read the manuscript with the title: "A Comprehensive Overview on Pharmacological and Therapeutic Insights of Solanum nigrum Linn" and I have some recommendations:

- You presented numerous therapeutic actions/activities, but to be more easily understood, they should be grouped (for example, protective activity that includes all protective effects, including neuroprotective or antioxidant: anti-oxygen, anti-radical, etc.) and also to create a table with these actions.
- Also, add a table with clinical studies.
- Please correct your sentence: 'The hepatotoxicity and hepatoprotective activity of this plant helps to enhance kidney and liver function.'
- To be completed with toxicity studies
