ESRRB wt Allele

National Cancer Institute

Source

National Cancer Institute. *ESRRB wt Allele*. NCI Thesaurus. Code C139918.

Human ESRRB wild-type allele is located in the vicinity of 14q24.3 and is approximately 191 kb in length. This allele, which encodes steroid hormone receptor ERR2 protein, is involved in rod cell survival and inner ear development. Mutation of the gene is associated with autosomal recessive deafness type 35.
