Potential competing interests: No potential competing interests to declare.

The paper is well-written and perfectly addresses the new idea. But there are some issues that need to be addressed!

The paper is too long, and this will make the readers exhausted and unwilling to read all parts of the paper. So, I suggest that you efficiently summarize the length of the paper.

In the abstract, no need to explain the advantages of the new idea. You just need to define the novelty and your strategy for solving the problem.

The introduction is shallow and needs to be enriched by some new references.

In all parts of the paper, you need to define the problem more mathematically. So please define your problem based on the related mathematics.
