H-ras Antisense Oligodeoxynucleotide ISIS 2503

National Cancer Institute

Source

National Cancer Institute. *H-ras Antisense Oligodeoxynucleotide ISIS 2503*. NCI Thesaurus. Code C2024.

A synthetic oligodeoxynucleotide. Functioning as an anti-sense agent, it hybridizes to the translation initiation region of the human mRNA for the oncogene H-Ras. ISIS 2503 selectively inhibits the expression of H-Ras, and may inhibit the growth of some Ras-dependent tumor cells. (NCI04)
