Potential competing interests: No potential competing interests to declare.

The author used the model CNN, which is used for accuracy, not for speed. If you are dealing with speed, then YOLO is a better option.

The author tried to justify the work, but a lot of gaps are present. The second paper is not organized in a way that needs improvement. For example, the accuracy and speed parameters, and the posture is not completely identified.

1. A state-of-the-art comparison table is required.
2. Need to rewrite the conclusion in detail with the contribution and methodology.

Overall, they require improvement in the abstract, introduction, and experiment sections to better justify the results.
