Potential competing interests: No potential competing interests to declare.

The paper emphasizes the importance of considering socio-economic factors, improved access to food, and reduced vulnerability in the pursuit of beneficial outcomes. It underscores the need for agricultural communities to be inclusive, taking into account their social circumstances, physical environments, and cultural heritage.

A notable aspect of the paper is the proposed transformative model for agritourism development. The model identifies key catalysts, including location, funding, product quality, marketing techniques, infrastructure, and legislative support. These elements are recognized as essential components for driving viable agritourism, and the model serves as a valuable guide for future progress in this sector.

This insight highlights a potential area for improvement in promoting the diverse prospects that agritourism offers.
