

# Review of: "[Review] Cyclic GMP-AMP synthase- Stimulator of Interferon Genes Signaling and their Agonistic / Antagonistic Values"

Eriko Padron Regalado

Potential competing interests: No potential competing interests to declare.

The review manuscript does a good job at describing the cGAS-STING signaling and the findings related to this topic. I think the work is very comprehensive, also providing a good number of references.

The manuscript also includes information related to the STING activation by DNase to eliminate self-DNA, which makes the work to look more complete.

Having said this, I think there are some areas of improvement for this nice manuscript. There are some grammatical errors throughout the whole manuscript. I suggest making proper arrangements for this. In addition, the manuscript would be benefitted with a specific section regarding medical applications of this signaling backed up by proper scientific evidence.

In general, I recommend this manuscript to be published/posted after proper arrangements have been made.
