Potential competing interests: No potential competing interests to declare.

The paper needs a major overhaul.

1- The introduction does not give us the main objectives of the study; it talks about many things that are not continuous, especially in the opening paragraphs.

2- It would be better to give a full explanation for every abbreviation in the text, at least once. For example, what is DDT?! Do you mean DDT (toxic to a wide range of living organisms)?

3- You must give a full explanation of abbreviations in the captions of figures and in the titles of tables to make them more understandable to the reader.

4- In section 1.1, the author has tried to explain the aim of the study, but there are still jumps from one topic to another.

5- In section 2.1, where the author has explained the strategies, the explanation of a text on soil organic matter has only broken the story.

6- The author mentioned that the anthropogenic process is the change in texture of agricultural soils and added Figure 17 as an example. But there is no explanation or clear description of this picture. For example, how it happened and how it will affect agro-ecosystems.

Overall, the topic of the paper seems interesting, but the author needs to improve all sections of the paper to make it clearer and more understandable.

Best Regards,
