

Review of: "Ternary instantaneous noise-based logic"

Dr. Animesh Bhattacharya

Potential competing interests: No potential competing interests to declare.

The paper is discussed about the representations of three-valued instantaneous noise-based logic. This is an interesting study and the authors have collected ample idea from the literature review. However, in my opinion the paper has some shortcomings as follows:

1. Author should more discuss about the novelty of the work with respect to the existing work.
2. Author should discuss about the propagation delay of the proposed system.
3. More relevant references can be added.
4. Conclusions should be modified to highlight the main findings of the proposed system.

With these minors modifications the paper can be accepted for publication.
