Growth Hormone Insensitivity Syndrome

National Cancer Institute

Source

National Cancer Institute. *Growth Hormone Insensitivity Syndrome*. NCI Thesaurus. Code C129867.

A group of inherited syndromes in which there is impaired growth hormone signaling, despite normal or increased growth hormone concentrations. The syndromes are characterized by some or all of the following: prenatal and/or postnatal growth failure, immature facial features, microcephaly, neurocognitive deficiencies, sensorineural hearing loss, immune dysregulation, and delayed puberty.
