**Potential competing interests:** No potential competing interests to declare.

It is my opinion that the submitted work is in an early stage and cannot be considered as a scientific article that includes any innovation or impacts an engineering field or science. Thus, I recommend not publishing the manuscript and suggest to the authors to resubmit when they have a more complete work that will at least include

Proper literature survey

Details on the developed hardware and software as well as specifications and applications

Results with comparative data from relevant works and discussions on the pros of their approach.

Suitable and integrated concluding remarks.
