Good work. Article is written nicely. The following aspects need to be considered/addressed:

1. PXRD pattern of nanoparticles must be incorporated.
2. Standard deviation of mean should be included along with the average size of the nanozyme.
3. The first time an abbreviation is used, it should be specified; thereafter, full names should not be used.
4. Place the Figure 2 in section 3.2.
5. Use of the terms nanoparticles and nanozymes may confuse the readers. Please make it uniform throughout the manuscript.
