Potential competing interests: No potential competing interests to declare.

The abstract and conclusion sections would benefit from better organization to clearly highlight the novelty and contribution of this review paper. Currently, the key contributions and unique insights could be more explicitly stated to attract readers and emphasize the significance of the review. While the paper comprehensively covers opportunities, trends, and challenges in the IoT applications within smart grids, it would strengthen the manuscript to clearly articulate what novel perspectives or insights it brings compared to existing literature. This could include more focused discussions on emerging technologies or methodologies that shape the future of IoT in smart grids. To enhance readability and comprehension, consider incorporating more tables and figures throughout the paper. These visual aids can effectively summarize key findings, trends, or comparisons within the IoT applications in smart grids landscape. Additionally, graphs and diagrams could help illustrate complex concepts or trends discussed in the text. I recommend using these references for updating the paper:
