Potential competing interests: No potential competing interests to declare.

This paper provides an in-depth and integral approach to the study of bioactivity in a particular medicinal plant, which may inspire other researchers in the field. It should be published.

Some suggestions for the authors:

- 1.- Try to reduce the title. It is too long.
- 2.- Provide more detailed information on the rhizomes analyzed. Did the authentication involve objective measurements? In which season of the year were they collected, and how were they stored?
- 3.- Consider a more detailed justification of the receptors chosen.
- 4.- Minor typos to correct:

2.2.4. second line: Should say "order" instead of other.

Fig. 1. Should say "flavonoid" not flavonoid.

Also, for this Figure, I suggest using a bar graph instead of a line graph.

3.6.5. Third line: Should say "has" instead of as.
- 5.- More information on the differences between FD-1, FD-3 is in order, as well as the GC-MS analysis.

Congratulations.
