**Potential competing interests:** No potential competing interests to declare.

Thanks for submitting this research article, in which the research idea and problem are innovative and highly needed for digital health technologies (DHTs).

- Regarding the Abstract, it needs to be specified into the following parts (Background, Aim of research, Research questions/hypotheses, Methodology, Results, Conclusion, and Recommendations).
- The significance of the study should be illustrated clearly.

Methodology: The research design should be specified, namely, what is the selected study design used for the mixed methods in the research.

- The aim of the research should be clearly stated, then the research questions to be answered.
- The interview questions need more clarification and should be described in terms of purpose and content, including validation and reliabilities.
- A table of socio-demographic characteristics of the participants should be illustrated in the study results part as frequencies and percentages.
- Statistical methods should be mentioned.
- Regarding the used abbreviations, the full spelling and the abbreviation in parentheses should be illustrated the first time, then use the abbreviation only.

Best of luck

Best regards
