**Potential competing interests:** The author(s) declared that no potential competing interests exist.

The manuscript is a review on the relationship between immune system and sepsis. The topic is original and the information contained in the review is updated and relevant for the research in this field.

There are just a couple of issues that Authors should consider.

- 1) the abstract is not informative of the content of the manuscript and there is never talk of an immune system or sepsis. Authors should better summarize what they will later explain in the text, also adding the purpose that the review proposes.
- 2) The names of the genes go in italics but also in lowercase.
- 3) It would be very useful a table summarizing the names of the genes, together with the acronyms mentioned.
- 2) At the end of such a structured presentation, it would be useful to have a paragraph of final conclusions.
