Review of: "Assessment of COVID-19 from Features Extraction of Exhaled Breath Using Signal Processing Methods"

Piyush Chaudhari[1]

1 Indiana University at Bloomington

1. The organization of the paper is acceptable.

2. The proposed method is to be explained, justifying the selection of the feature extraction methods.

3. The limitations of the proposed land use identification method have to be written in the paper.

4. The details of the dataset used for experimentation are to be added.

5. Few grammatical corrections are required in the text.

6. The subject and experimental work presented in the paper is interesting.

7. The graphs need to be elaborated more.
