Very good manuscript, just suggestions to improve the manuscript. The author has done a good job. However, there are a few reasons if taken it will do so well. I have highlighted some things that the authors need to adjust before this publication is proposed;

- 1- The authors did not mention the exact year of collection of the plant in Part 2.2
- 2- The authors did not mention the number and sex of mice and cohorts in Part 2.4
- 3- The authors did not mention the type of solvent used to dissolve the extract in parts 2.5 and 2.6.
- 4- The research also lacks modern sources, as there are only two sources for the year 2022
