E3 Ubiquitin-Protein Ligase AMFR

National Cancer Institute

Source

National Cancer Institute. *E3 Ubiquitin-Protein Ligase AMFR*. NCI Thesaurus. Code C17577.

E3 ubiquitin-protein ligase AMFR (643 aa, ~75 kDa) is encoded by the human AMFR gene. This protein plays a role in endoplasmic reticulum-associated degradation, protein polyubiquitination, and autocrine motility factor binding.
