Problem is not well mentioned in the abstract and in rest of the paper. Introduction is general stories which have no link with the objective and problem of the study. Moreover problem of the study is either not mentioned or incorrectly mentioned in the study. Title of the study should linked with the objectives of the study which is not the case here. Literature review is very general and don't presented in way to identify the gap in the literature. The study needs to develop a theoretical framework which shows how the sectoral government expenditure is linked with economic growth of the country and then try to prove or oppose the framework through your use of secondary data by using the most appropriate time series econometric model. Though the study mentioned and use some time series econometric methods but fail to provide solid justification and its comparison with other peer econometric methods. Moreover, the needs to make use of some non-linear time series econometric method in order to check whether the relationhsip is non-linear or not. In my opinion the study needs major revisions.
