The manuscript is well written and nicely presented. A good effort have been taken by the authors. The data used in the study is good enough and result part is also nicely interpreted. However, some of the part of the manuscript can be improved. Some of the suggestions from my side are given here.

#1. In the introduction part of the MS (manuscript) the research gap should be clearly mentioned.

#2. Soil map can be included in the MS

#3. The limitation of the current finding may be included in the conclusion section.
