Abstract

Include name of country in line 2 methods section. Frequency of COVID-19 what? Is it ever infection or current infection as at time of study. Please make it more clear

No mention of KPK as an abbreviation prior to now. Delete proving in the conclusion section

Introduction

Paragraph 2, when you say "presently Pakistan is facing the 5th wave...", I think you should include the date for easy guidance

Methods

The methodology is quite scanty. You need to talk about the design, sampling (size & technique). The questionnaire itself, how was it developed? Was it pre-tested? What other psychometric properties were conducted? The scoring (if necessary). Why was no gender and other demographic characteristics-based sensitivity analyses carried out? I only saw risk ratio based on clinical and preclinical

Results

Avoid single sentence paragraphs. The results is also quite scanty. No reference to the tables and figures are stated in the results. No summary description of the other findings narratively in the results section. The pie charts have difference colors and this makes it confusing. In the bar charts use uniform font sizes across board

Discussion is Okay
