Review of: "New Method to Identify Potential Illegal Water Use Location by Using Remote Sensing and Neural Networks in Laguna de Aculeo, Chile"

Pablo Spennemann

Potential competing interests: No potential competing interests to declare.

The manuscript is well-written, and the results and conclusions are consistent with the stated objectives. In particular, it would be necessary to correct and unify when referring to soil or land indices, given that most indices are related to vegetation and it is not appropriate to group them under a single description.
