Thank you for the invitation to review this manuscript. The ideas included in the article are interesting, but for the characterization of the synthesized compounds, the authors used only the ¹H NMR, which is not sufficient. Therefore, I suggest publishing this work after justifying the purity of the products and providing further analyses justifying the proposed structures.

My comments are listed below.

Authors should include in the supporting data the ¹³C NMR, FT-IR spectra, and chromatograms or elemental analysis justifying the purity of the synthesized derivatives.
