Potential competing interests: No potential competing interests to declare.

The paper is interesting. However, I suggest some minors changes for the improvement of the manuscript.

i) The paper formatting can be improved.

ii) The introduction can be improved by including some literature review related to the work.

iii) In "Results and discussion" section, discussion can be elaborated by comparing the results with other research works by providing citations of their works.

iv)The numbering of heading and sub-heading should be done.

After incorporating these points, this paper may be accepted for publication.
