

Review of: "Measuring the Deviations from Perfect Competition: International Evidence"

Paweł Kossecki

Potential competing interests: No potential competing interests to declare.

Title and Abstract: The title is clear and informative. The abstract succinctly outlines the study's aim, methodology, and key findings. However, it would benefit from a brief mention of the main conclusion.

Introduction: Expand on the motivation behind the study. Elaborate on why measuring deviations from perfect competition is crucial in the current economic context. Clarify the specific objectives and hypotheses of the study.

Literature Review: A dedicated literature review section could enrich the paper. It would contextualize the study within existing research, highlighting what new insights your study offers.

Methodology: More detail on the choice of countries and data sources is needed. Discuss why these particular countries were chosen and acknowledge any biases or limitations this might introduce. Explain the rationale behind the selection of specific economic indicators.

Data Analysis: Provide a deeper analysis of the results. Discuss potential reasons for the observed deviations from perfect competition in different countries. Consider economic, political, and social factors that might influence these deviations.

Discussion: Compare your findings with existing literature. Discuss any discrepancies and what they might mean. This could involve exploring different theoretical perspectives or economic models.

Conclusion: Offer more detailed implications of your findings. How do these deviations affect economic policy, business strategy, or future research? Suggest specific areas where further research is needed.

Writing and Presentation: Consider restructuring some sentences for better clarity and conciseness.

These improvements would enhance the depth and clarity of your research, making it a more valuable contribution to the field.
