Bile Duct Papillary Neoplasm with an Associated Invasive Carcinoma

National Cancer Institute

Source

National Cancer Institute. *Bile Duct Papillary Neoplasm with an Associated Invasive Carcinoma*. NCI Thesaurus. Code C96810.

A papillary epithelial neoplasm that arises from the epithelium of the intrahepatic or extrahepatic bile ducts and it is associated with an invasive carcinomatous component. For intraductal papillary neoplasms of the intrahepatic bile ducts, the carcinomatous component is an intrahepatic cholangiocarcinoma; for intraductal papillary neoplasms of the extrahepatic bile ducts, the carcinomatous component is an adenocarcinoma.
