

Review of: "Critical Research Thinking: A Recipe for Academic Writing Success and Publications"

Eka Purnama Harahap

Potential competing interests: No potential competing interests to declare.

The theme of this article is interesting. The study explores the importance of critical thinking in enhancing the ability of students and academics to critically evaluate information, construct well-supported claims, and make meaningful contributions to academic knowledge. However, the content of the writing lacks focus and is too broad. Instead, focus on one particular problem. The research methods are not detailed. There must be an explanation of the particular theory as the basis, the formulation used, and the research model as the basis for producing the final results. From the existing data and discussions, the findings obtained are too broad and unfocused.
