

# Review of: "Thermal Remote Sensing: A tool to Determine Temporal Land Surface Temperature in Hawassa City, Ethiopia"

Nouh Rebouh

Potential competing interests: No potential competing interests to declare.

- Expand the literature review to clearly present the research gap and problem statement. See some recent works.
- We suggest the authors to add a workflow chart of image pre-processing applied in this study.
- What is the role or the effect of Land surface temperature in research on the effects of urban heat islands at the investigated area?. The authors must indicate that at the text and clear it by model.
- Authors need to add a field test to improve the data analysis and results of land sat is true or false.
- The references need to be reformatted. The name of the journal need to be abbreviated in the references. The abbreviated name of the cited journals can be found at <http://library.caltech.edu/reference/abbreviations/>
