Potential competing interests: No potential competing interests to declare.

Improve the introduction by adding more discussion about the major topics or points of the study, which are the knowledge, attitude, and practices of the chosen respondents towards buruli ulcer. Also, describe the status of the knowledge, attitude, and practices by inserting past studies about the topic.

The methodology and results were very well discussed and well-stated. However, in the discussion, only the knowledge part was fully explained and discussed. Thus, it is recommended to do the same with regards to the attitude and practices of the chosen respondents towards buruli cancer.

Add more supporting statements/literature in the introduction and discussion to strengthen the arguments.
