Hello,

I want to congratulate you on the project, because it is simple but innovative, I encourage you to continue developing it. In this article I suggest that you review the grammar of the entire document, since the difficulty of the language is evident. I suggest updating the references, since there are new articles that can be taken as a reference. Figure 1 can be improved, since it shows that it is a compendium of many figures with different styles. In figure 3, it is glasses and not goggle. The diagram in Figure 4 must be improved, since a flow diagram has a beginning and end, or is cyclical, which is not noticeable in this case, because if an alarm occurs the process stops, and it also seems that at every moment the GPS is initialized.
