

Review of: "[Commentary] Population dynamics, plasma cytokines and platelet centrifugation: Technical and sociodemographic aspects of 'ovarian rejuvenation'"

Naresh Poondla

Potential competing interests: No potential competing interests to declare.

The article by E Scott Sills et al "Population dynamics, plasma cytokines and platelet centrifugation: technical and sociodemographic aspects of 'ovarian rejuvenation' is a well-written paper that explores potential of a new method of ovarian rejuvenation.

Minor Comments:

1. The authors could provide detailed data on the study participants, such as age ranges and demographic breakdowns.
2. The authors could include the informed consent process and the potential impact on reproductive autonomy.
3. The authors could have provided more detailed information on the risks and potential complications associated with platelet centrifugation.
