

Review of: "MTHFR and LC, CFS, POTS, MCAS, SIBO, EDS: Methylating the Alphabet"

Nilanjana Banerjee

Potential competing interests: No potential competing interests to declare.

The article has been very well written. Every topic, which includes the role of MTHFR in LC, CFS, MACS etc has been very adequately and vividly discussed. Each topic has been explained with illustrations. The implications for aging, neurodegenerative disease, autoimmune disease cardiovascular disease and cancer has also been explored elaborately. The readers will definitely benefit from the article.

I have no objection in the publication of this paper in the journal.

Best wishes for the author.
